

App Goal:

The goal of the app is to create a B2C SaaS platform that will give undergraduate students a way to find jobs after graduation. It is a unified platform in the sense that it connects all the students using it to each other and will allow for communication and other applications all in its UI, which makes it different from the competition. The connections and communication will happen through social media and in house on the platform.

Team Generated Feature List (same as team):

Feature	Description
Tagging	Courses will be tagged to particular fields of interest and careers
Connections	Allow users to connect with students who are on a similar career path and ask opinions or network.
Events	Allow users to host and RSVP into career fair events with filters
Advanced Description	Expandable description for course work leading to a more understood outcome.
Recommendations	Future courses will be recommended based on previous courses and skills acquired from class history
